

## **Crackling Microstar Star:**

**Name:** Bismuth Dragon Eggs

**Source:** David Trimmel

<b>Chemical</b>	<b>Parts by weight</b>
Bismuth Trioxide	37.5
Copper(II) Oxide, black	37.5
Magnalium, granular, -275 mesh	25

### **Notes:**

Bind with the following solution:

20 parts Winchester 231 Smokeless Gun Powder added into a solution of 70 parts amyl acetate and 30 parts acetone. This crackle formula tends to make one or two loud pops compared with the less intense multi-pop performance of typical dragon eggs. This formula is ideally suited for use as an exploding star core.
