

Pearl Streamer Star:

Name: Kentish #3

Source: Thomas Kentish

Chemical	Parts by weight
Zinc Powder	4
Potassium Nitrate	2
Charcoal	1
Meal Powder	1

Notes:

The Kentish formulas do not include the binder in the formula itself, rather it was dissolved into the wetting solution. The specified gum Arabic solution contains 1-1/4 oz of gum to a pint of water, or 284 grams per gallon. However, 100 grams per gallon should be adequate, since that is the typical binder used in Maltese stars.
